1 INTRODUCTION

Welcome to the Johns Hopkins University’s Department of Mechanical Engineering! In our time, we have seen once-diverse engineering fields merge and new technologies redefine industries. To keep abreast of rapid technological innovation, engineers must be able to continually update and renew their knowledge throughout their careers.

The task of preparing students for this environment is facilitated by our focus on fundamentals and the low student-to-faculty ratio of the Department of Mechanical Engineering. Educating a small, select group of students has permitted the development of a number of distinctive educational features such as a “capstone” design course that closely simulates professional practice, student participation in faculty research, close faculty-student interaction, and effective advising. By means of flexible programs grounded in fundamentals, we enable our graduates to pursue the lifelong education needed to excel in a rapidly changing world.

1.1 Objectives

In fulfilling our mission of preparing our graduates for the future, we start with the recognition that, at the root of the ever-growing variety of technological innovations lie scientific, engineering, and professional principles that are both a foundation for the student’s understanding and a compass throughout his or her career.

A primary objective of the Mechanical Engineering curriculum is to emphasize the importance of these fundamental principles and to help students understand them and master their application. Laboratory experience is invaluable for this purpose and we provide meaningful hands-on experience in modern instructional and research laboratories, so that students gain the skills of acquiring, analyzing, and interpreting data.

Fundamental principles are as vital today as when they were first discovered. This aspect is illustrated by showing them “in action” in the more advanced courses devoted to contemporary applications.

The demands of advanced technology, economy, and efficiency put an ever-increasing premium on the quantitative aspects of engineering. For this reason, students must also be educated in the application of advanced mathematical and computational techniques in engineering analysis and design.
1.2 Programs

1.2.1 Academic Programs – Two Majors

The Department of Mechanical Engineering offers two distinct programs of study for undergraduates at Johns Hopkins: Mechanical Engineering and Engineering Mechanics.

The **B.S. Mechanical Engineering** program places an emphasis on mechanical and thermal-fluid systems analysis and design. Students develop a wide range of fundamental skills required of the mechanical engineering professional and choose upper-level technical electives for further in-depth study.

The **B.S. Engineering Mechanics** program is designed to provide students with a highly flexible but rigorous foundation in solid and fluid mechanics. Students choose an area of specialization in preparation for technical careers or for graduate and professional school.

The objectives indicated before are common to the two programs. In addition, they share the following features:

- **Flexibility.** While the Engineering Mechanics curriculum is, by design, very flexible, both curricula offer several technical electives and allow students to pursue special interests in engineering, physics, biology, mathematics, management, and humanities. Double-majors and a 5-year Master’s degree are also possible.

- **Interdisciplinary approach.** Both programs require courses in the basic sciences and mathematics and other engineering disciplines (including electrical, civil and materials). Each program also offers elective opportunities in diverse areas such as the physical and mathematical sciences, aerospace engineering, biomedical engineering, and environmental engineering. Students have the opportunity to interact with a multidisciplinary faculty both in the classroom and in research laboratories.

- **Preparation for professional practice.** The modern engineer must be well versed in communication and teamwork skills. These are developed in a number of courses that involve laboratory exercises, report writing, and oral presentations. In addition to the two-semester freshman introductory and senior capstone design courses, the students’ development in solving design problems is cultivated and encouraged through design electives and special design projects assigned in many of the courses.

The requirements described in this guide are intended to ensure an excellent foundation in science, humanities and social sciences, engineering sciences and
engineering design methods, as well as preparation in the specializations of Mechanical Engineering and Engineering Mechanics. Both programs are accredited by the Engineering Accreditation Commission of ABET, [http://www.abet.org](http://www.abet.org).

### 1.2.2 Mechanical Engineering Program Educational Objectives

Our primary objective is to educate an exceptional group of engineers who, after graduation, will be (1) successful and on track to become leaders among their peers in industry, government laboratories and other organizations, and (2) advanced students in the best graduate programs.

### 1.2.3 Mechanical Engineering Student Outcomes

Students graduating with a B.S. in Mechanical Engineering will have demonstrated...

1) an ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics

2) an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors

3) an ability to communicate effectively with a range of audiences

4) an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts

5) an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives

6) an ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions

7) an ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

### 1.2.4 Engineering Mechanics Program Educational Objectives

Our primary objective is to educate an exceptional group of science-oriented engineers who, after graduation, will be successful and on track to become leaders among their peers (1) in the best graduate programs in engineering, science, medical schools, or law schools, and (2) in industry, government laboratories and other organizations.
1.2.5 Engineering Mechanics Student Outcomes

Students graduating from the B.S. in Engineering Mechanics will have demonstrated...

1) an ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics

2) an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors

3) an ability to communicate effectively with a range of audiences

4) an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts

5) an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives

6) an ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions

7) an ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

1.2.6 Research Programs

The research programs in the Department of Mechanical Engineering are broad and varied:

- Energy and the Environment
- Fluid Mechanics and Thermal Processes
- Mechanics and Materials
- Micro/Nanoscale Science and Engineering
- Mechanical Engineering in Biology and Medicine
- Robotics, Systems, and Control

A comprehensive list of research topics and the faculty participating in them appear on the Mechanical Engineering website’s Research page.
1.2.7 Undergraduate Research Opportunities

The faculty welcomes undergraduate student participation in their research, which greatly enhances the educational experience beyond coursework. Opportunities are available during the academic semesters, intersession, and summer through independent study and research courses or through paid research positions.

Undergraduates at all levels are strongly encouraged to contact faculty members directly to participate in the Department’s research programs.

1.2.8 “Laboratory Safety for Undergraduates” Course Required for Lab Courses

All students taking courses with experimental labs must now take EN.990.100 Laboratory Safety for Undergraduates before registering for your courses. This two-hour online course should be completed 24 hours before your registration period begins so the SIS registration system will acknowledge the course’s completion.

If you are registering for any of these, you must take EN.990.100:

- EN.530.115/116 MechE Freshman Laboratory I/II
- EN.530.205 Manufacturing Engineering Laboratory
- EN.560.211 Statics and Mechanics of Materials Lab
- EN.530.212 Mechanical Engineering Dynamics Lab
- EN.530.216 Mechanics Based Design Lab
- EN.530.232 Thermodynamics Lab
- EN.530.243 Electronics and Instrumentation Lab
- EN.530.254 Manufacturing Engineering
- EN.530.329 Intro to Fluid Mechanics Lab
- EN.530.335 Heat Transfer Lab
- EN.530.344 Design and Analysis of Dynamic Systems Lab
- EN.530.352 Materials Selection
- EN.530.381 Engineering Design Process
- EN.530.403 (Fall) / EN.530.404 (Spring) Senior Design
- EN.530.446 Experimental Biomechanics

To take the course:

1. Open the myJH Portal
2. Select the Education sidebar tab
3. Select the MyLearning option
4. Enter Laboratory Safety Introductory Course in the search area
5. Select the course title, then Add to Dev Plan
6. Click Next, then click Done to begin the course.
7. If you need help, contact help@jhmi.edu
Please note that the course EN.990.100 will NOT be visible on your transcript even after you successfully complete it. It is administratively recorded in SIS, and will be read by SIS when pre-requisite checking your selected courses.

1.2.9 “Laboratory Safety for Undergraduate Research Assistants” Course Required

Your safety in the lab is paramount, more important than any research or academic benefit you obtain from doing research. The Whiting School has created a lab safety course, which provides a baseline level of safety knowledge—it is not comprehensive. Each laboratory has its own particular hazards and must train you on how to avoid them. The online course gives you a basic understanding of lab hazards and the vocabulary to learn more about safety in your lab.

Please complete the course online:

- Go to the “myJHU” Portal and sign in with your JHED ID and password.
- Under the Education sidebar tab—select the “myLearning” option.
- Select the “Course Catalog” tab on the left, and enter the text “Laboratory Safety for Undergraduate Research Assistants” in the “search” tab and select the “Add to My Plan” tab. Follow the additional instructions and it will be added to your plan.
- In the plan, select the course title’s link, which will take you to its window. Select the “take course” button and you will be able to being the course.

The course has 6 modules presented in a PDF file, with online exercises and an exam. The total course is about 45 pages and takes about 3 hours to complete.

When you have completed the course, Johns Hopkins will e-mail you a certificate. Your department or principal investigator will require you to present a copy of the certificate before beginning work in the laboratory.

If you have questions about laboratory safety or the course, contact Dr. Daniel Kuespert, Laboratory Safety Advocate, dkuespert@jhu.edu or 410-516-5525.

1.2.10 “Responsible Conduct of Research Course” May Be Required

Many undergraduate students participating in research will be required to take the “Responsible Conduct of Research” course.

- Students receiving payment for research or who are conducting research used to help complete degree requirements (such as in an Independent Research or Independent Study course) must first complete the online training course (AS.360.624) before conducting research and receiving payment or credit.
• Students receiving payment from NIH Training Grants must take the in-person training course (AS.360.625).

Information is available on the Responsible Conduct of Research page. Successful completion of this course must be verified before a student’s diploma is issued.

1.3 Advising

The Department’s faculty coordinator for undergraduate advising is the Director of Undergraduate Studies, Professor Steven Marra, whose office is in 123 Latrobe, telephone 410-516-0034, e-mail marra@jhu.edu.

All undergraduate students must follow a program approved by their faculty advisors.

1.3.1 Visit Your Advisor Often

Each student should see his or her advisor to plan a course schedule, change courses, and discuss degree requirements. It is important to determine an outline of the total four years of courses as early as possible. Students can also discuss issues related to academics or academic performance at any time.

Students must initiate a meeting with his or her advisor at least once – and preferably more – each semester.

A meeting approximately four weeks after classes begin provides a useful time to inform the advisor of potential difficulties in individual courses. Additional meetings occur in November and April during the two Advising Weeks, when decisions must be made on course registration for the following semester.

1.3.2 Advising Holds on Registration

Advising Holds are placed on your registration record, which your advisor must release before you can register for classes. Advising Week is the week before registration begins for the next semester. The Advising Hold is released only after you review your course plans with your advisor. Please arrange an appointment with your advisor during Advising Week.

1.4 University Catalog

The JHU University Catalog is a valuable resource for information on academic and administrative procedures, registration, grading, professional opportunities, and student life.

Please refer to it often, as it will answer many questions about policies and procedures.
1.5 **Blue Jay Families**

The JHU Office of Parent and Family Relations has created a companion website “Blue Jay Families.” Please encourage your parent(s) or guardian(s) to refer to this as it provides helpful information about suggestions to support you in your student experience.

2 **GENERAL REGULATIONS**

2.1 **Course Grading – Letter Grades vs. S/U grades**

The Department of Mechanical Engineering requires that all courses counted toward the 126 credit requirement for either Mechanical Engineering or Engineering Mechanics be taken for a letter grade (that is, they may not be taken with the Satisfactory/ Unsatisfactory option).

**COVID-19 Exceptions**

Typically, all courses for the degree must be letter graded. The COVID-19 pandemic has required some exceptions.

**For courses taken Spring 2020**

- Any undergraduate course (xxx.4xx +) or graduate course (xxx.6xx +) taken as an undergraduate student will count, as long as it has an S* grade.
- Any graduate courses taken as a master’s student (in the 5th year) that are intended to count towards a student’s degree can still be counted if the grading method has been changed to P/F. ‘F’ grades cannot count towards a degree requirement. See the Whiting School Spring 2020 COVID-19 FAQ page for information.

**For courses taken in Fall 2020**

- Any undergraduate course (xxx.4xx +) or graduate course (xxx.6xx +) taken as an undergraduate student that qualifies for the degree could count, as long as it has an S** grade or a grade of C- or higher (or D or higher for up to 10 credits of Humanities/Social Science courses).
- One graduate course (xxx.6xx +) taken as a master’s student (in the 5th year) toward the degree requirements can be graded P (Pass), but all others must have a letter grade of B- or higher. The department will accept up to one course for the master’s degree with a C- or higher, but B- is preferred.

*(See the next page…)*
For courses taken in Spring 2021

- Any undergraduate course (xxx.4xx +) or graduate course (xxx.6xx +) taken as an undergraduate student that qualifies for the degree could count, as long as it has an S** grade or a grade of C- or higher (or D or higher for up to 10 credits of Humanities/Social Science courses).

2.1.1 Grades Below C- (Engineering, Math, and Science)

The Department of Mechanical Engineering requires that grades of C- or better be obtained in all Engineering, Mathematics and Science courses. Grades of D+, D, or F will not be accepted, even though credits will appear in the transcript for D-level grades.

2.1.2 Grades Below C- (Humanities and Social Sciences)

Though grades of C- or higher are preferred, the department will accept up to ten D+ or D graded credits toward graduation requirements for Humanities and Social Sciences courses.

2.2 100-credit minimum at Johns Hopkins

All students must earn a minimum of 100 credits at Johns Hopkins University, even if they are not all used for a student’s major or minor. Please keep this in mind when using AP or IB credits or transferring credits from other schools.

2.3 WSE Course-Level Guidelines

In an effort to promote consistent course labeling, the course numbering guidelines found below are used throughout the University:

- 100: introductory/freshman-level coursework
- 200: sophomore-level coursework
- 300: junior-level coursework
- 400: senior-level coursework; typically permitted to apply to graduate degrees (at the discretion of the student’s department)
- 500: undergraduate independent study, undergraduate research, and senior thesis coursework
- 600: graduate coursework; typically graded with letter grades
- 700: advanced graduate and topics courses
- 800: graduate seminars, graduate independent study, graduate research and dissertation research coursework
2.4 **Courses taken at other Universities**

The University allows no more than 12 credits completed prior to matriculation or in summer sessions at other accredited colleges or universities to be counted toward the degree.

Transfer students are not subject to this restriction. They must obtain credit for courses they wish to transfer during their first year at Hopkins. University regulations also require a minimum of two years' residence for a Hopkins degree.

Pre-approval is required to take a course at other accredited colleges or universities while enrolled as a Hopkins undergraduate student. Visit the [Mechanical Engineering Undergraduate Advising webpage](#) “Approval Required: Credit Overloads / Taking Classes Outside JHU” for information.

2.5 **Course Waivers – No Credits Earned**

As a result of mathematics placement testing or prior course experience in high school, some students may be allowed to begin their course sequences at a higher level than in the initially prescribed curriculum. For example, some students may initiate the math sequence at Calculus II instead of the traditional Calculus I start.

No academic credit is given for waivers. A waiver merely shifts the beginning level of course work. Students must earn the prescribed number of credits for each portion of their degree and work with their advisors to select appropriate classes.

2.6 **Advanced Placement**

Johns Hopkins University grants credit for many Advanced Placement (AP) and International Baccalaureate (IB) examinations, including calculus, chemistry, physics, computer science, economics, languages biology, environmental science, and statistics. Visit the [Johns Hopkins Catalog’s External Credit Policies](#) page for information.

Many, but not all, AP credit can substitute for courses required for the B.S. degrees in Mechanical Engineering and Engineering Mechanics. A student’s academic advisor or the Academic Program Manager can help determine which will count.

Official records of advanced placement examinations should be submitted to the Whiting School’s Office of Academic Advising, 103 Shaffer Hall. AP scores will be entered on academic records upon receipt.
AP PHYSICS C (MECHANICS)

Students who have earned a score of 4 or 5 on the AP Physics C (Mechanics) exam can receive four credits and are not required to take EN.530.123 Introduction to Mechanics I.

Students may not substitute AP credits for EN.530.124 Introduction to Mechanics II. All Mechanical Engineering and Engineering Mechanics majors must take this course, no matter what AP credits have been earned.

If a student takes a course that AP credits normally would replace, the AP credits will be lost. This is important to consider with the physics courses where taking EN.530.123 Introduction to Mechanics I will eliminate any earned AP Physics C (Mechanics) credits.

ADDITIONAL INTRODUCTORY PHYSICS CREDITS MUST BE TAKEN WITH AP PHYSICS C - MECHANICS CREDIT

Students starting as Mechanical Engineering or Engineering Mechanics majors...

- ...in the freshman fall semester must take EN.530.124 Intro to Mechanics II in the freshman spring semester.
- ...after the freshman fall semester should consult with their faculty advisor as to which course to take, either EN.530.124 Intro to Mechanics II or AS.173.111 General Physics Laboratory I.

AP PHYSICS C (ELECTRICITY and MAGNETISM)

Students who have earned a score of 4 or 5 on the AP Physics C (Electricity and Magnetism) exam can receive four credits and are not required to take AS.171.102/108 General Physics II.

While the University allows waiver of the associated lab, AS.173.112 General Physics II Lab, individual departments can still require the lab. Mechanical Engineering requires AS.173.112 General Physics II Lab for all Mechanical Engineering and Engineering Mechanics majors, even when AP Physics C (Electricity and Magnetism) credits are earned.

IB PHYSICS

The following credit is given for IB Physics:

- A score of 6 will grant 4 credits that will exonerate a student from taking EN.530.123 Introduction to Mechanics I. The courses EN.530.124 Intro to Mechanics II, AS.171.102 General Physics II, and AS.173.112 General Physics Lab II must be taken.
• A score of 7 will grant 8 credits that will exonerate a student from taking EN.530.123 Introduction to Mechanics I and AS.171.102 General Physics II.
  o The courses EN.530.124 Intro to Mechanics II and AS.173.112 General Physics Lab II must be taken.
  o If a student takes EN. 530.123 Introduction to Mechanics I, 4 of the 8 IB credits will be forfeited, but the remaining 4 will still exonerate a student from taking AS.171.102 General Physics II.

2.8 AP Computer Science credit

Students with no AP Computer Science credit or score lower than a “5” on the AP Computer Science exam must take one version of the 3-credit Gateway Computing course.

EN.500.114 Gateway Computing – MATLAB is preferred, but EN.500.112 Gateway Computing – JAVA and EN.500.113 Gateway Computing – Python are also acceptable.

Students who scored a “5” on the AP Computer Science exam have the option to take either…

• One of the Gateway Computing courses, in which case their AP CS credits will be forfeited, or…
• EN.601.220 Intermediate Programming, EN.601.226 Data Structures, or another programming course of at least three credits approved by the student’s faculty advisor, in which case the AP Computer Science credits will count toward the student’s core computing requirement (replacing Gateway Computing). EN.601.220 or EN.601.226 could count as a Technical Elective.

2.9 Independent Research and Independent Study

Students may wish to explore topics beyond coursework or expand learning on a course topic.

Independent Research is a course under the direct supervision of a faculty member in which a student identifies and proposes research work. The Mechanical Engineering course numbers are:

• EN.530.501 Undergraduate Research
• EN.530.511 Group Undergraduate Research, for groups of 5 or more students working on the same research or project
• EN.530.597 Research - Summer
Independent Study is the result of creating a course of study focused on topics beyond coursework or expands on a topic in which further study is desired. The Mechanical Engineering course numbers are:

- EN.530.526 Independent Study - Spring
- EN.530.527 Independent Study - Fall
- EN.530.599 Independent Study - Summer

Other Whiting School departments also offer independent research and study, but have different course numbers.

Up to three credits can be earned in any one semester, summer, or intersession.

**New Options to Count Independent Work**

**NEW as of Fall 2021:** Students can now count up to six credits of letter-graded independent work toward the B.S. Mechanical Engineering and Engineering Mechanics degrees as an elective in this manner:

- Up to three credits of undergraduate research (EN.530.501, EN.530.511, or EN.530.597)
- Up to three of independent study (EN.530.526, EN.530.527, or EN.530.599)

Students cannot count six credits of undergraduate research nor six credits of independent study.

**More Information About Independent Work**

- Each credit should reflect 40 hours of work, which is unpaid.
- No distribution credits are attached to independent work, though your advisor can designate a distribution through a Course Exception Waiver form on the Undergraduate Academic Advising page. This is necessary to count the course toward an elective.
- To count the independent research or independent study toward an elective section of the BS Mechanical Engineering or BS Engineering Mechanics degrees, the work must be at the rigor and vigor of upper-undergraduate (junior or senior) work or higher.
- Students must register in the first six weeks of the semester to earn independent research or study credit that semester. The University prohibits retroactive registration.
- Students taking three or more credits of undergraduate research are encouraged to present a research poster at the Johns Hopkins University’s DREAMS Undergraduate Research Day each spring. Announcements will be sent in advance to arrange to submit the poster.
The Mechanical Engineering department strongly recommends that a student have a cumulative GPA of at least 3.0 to request approval to conduct independent research or independent study.

**Pre-Approval is Required**

Before embarking on a project, students must obtain pre-approval from their academic advisors by presenting a completed “Independent Academic Work” form in SIS.

- Sign in to SIS at sis.jhu.edu.
- Go to the Registration menu and select “Online Forms.”
- Select “Independent Academic Work.”
- Complete and submit the form.
- The form will be sent to the student’s faculty advisor via e-mail for approval.
- Once approved, the student will be enrolled for the appropriate course.

Research performed without this pre-approval will not be recognized and accredited.

### 2.10 Student Classification and First Semester Grades

The Whiting School of Engineering stipulates that students entering JHU from high school will be classified as "freshmen," regardless of the number of credits earned through Advanced Placement or other pre-college programs.

### 3 DOUBLE MAJORS AND MINORS

Both Mechanical Engineering and Engineering Mechanics majors may elect to double major or to complete a minor from any department in the School of Engineering or the School of Arts and Sciences that offers one.

**Double Majors**

Students wishing to pursue a double major must contact the Whiting School’s Academic Advising office. Students must ensure that course requirements for both majors are met, and must visit faculty advisors from each major to obtain approval of the planned program.

**Major / Minors**

Students wishing to pursue a minor should confer with the department through which the minor is offered to ascertain the exact requirements. Available minors appear on the [Arts and Sciences](#) and [Engineering](#) pages.
Note that students must declare a minor, not just simply take the classes that will help meet the minor requirements. Students taking minors will be assigned an advisor in the department offering the minor.

### Robotics Minor

The field of Robotics integrates sensing, information processing, and movement to accomplish specific tasks in the physical world. As such, it encompasses several topics, including mechanics and dynamics, kinematics, sensing, signal processing, control systems, planning, and artificial intelligence. Applications of these concepts appear in areas like medicine, manufacturing, space exploration, disaster recovery, ordnance disposal, deep-sea navigation, home care, and home automation.

The faculty of the Laboratory for Computational Sensing and Robotics (LCSR), in collaboration with the academic departments and centers of the Whiting School of Engineering, offers a Robotics Minor in order to provide a structure in which undergraduate students at Johns Hopkins University can advance their knowledge in robotics while receiving recognition on their transcript for this pursuit.

### Entrepreneurship and Management minor

The minor in Entrepreneurship and Management from the Center for Leadership Education focuses on business and management from a multidisciplinary viewpoint. It is designed to provide students with the knowledge and skills to become leaders in technology companies.

Students may opt to take these courses separately from their major course requirements, but most can be incorporated into the course requirements so that only as little as four extra courses would be required to complete the student’s primary major plus the Entrepreneurship and Management minor.

It is important to work with your academic advisor to plan your course work plan so you can complete all courses, as you will take them over multiple years.

The table below illustrates how a student can complete the Mechanical Engineering or Engineering Mechanics major plus the Entrepreneurship and Management minor.

4 FREQUENCY OF ELECTIVE OFFERINGS

Elective courses are offered in specific semesters, and sometimes in alternating years. Below is a timeframe of elective course offerings listed in the anticipated order of next offering. These are subject to change due to instructor sabbaticals or unusual situations. Please confirm these offerings when planning your course schedule.

*Table 2 – Anticipated Elective Course Frequencies*

For anticipated graduate course frequencies, see the graduate advising manuals in the [Graduate Academic Advising page](#).
HUMANITIES AND SOCIAL SCIENCE REQUIREMENTS

The Humanities and Social Sciences play an important role in one’s education. The Whiting School of Engineering requires a minimum of six courses (each of at least three credits) in the Humanities or Social Sciences (catalog code H or S) distributions, and require one writing course and two courses at the 300-level or above.

Visit the JHU Catalog – Bachelor’s Degree requirements page for two exceptions to the rule that each H/S distribution course be at least three credits.

Look for the “H” or “S”!

When selecting courses, be sure the course includes either an “H” or “S” course distribution designation. Some may have both or may be paired with another course distribution (like “E,” “Q,” or “N”). Not all courses offered in the Krieger School of Arts and Sciences carry the designation.

NOTE: Some Center for Leadership Education (EN.660.xxx or EN.661.xxx) and Peabody School of Music (PY.xxx.xxx) courses carry “H” or “S” distributions, but many do not. Courses that do not carry either an “H” or “S” course distribution will not be accepted for the degree’s Humanities and Social Sciences requirements.

Be sure to verify the desired course has an “H” or “S” before registering for the course.

5.1 Foreign Language Credit

FIRST-YEAR FOREIGN LANGUAGE - ELEMENTS
Students taking elements of a first-year foreign language course can be counted for a humanities/social science course requirement even though it is not granted an H area designator only if the second semester course of the same first-year foreign language is successfully completed. Both courses would count toward the humanities/social science requirement.

Exception: the language courses taught by the Center for Language Education are not subject to the restriction. Those language elements courses can count as a humanities/social science course requirement.

FIRST-YEAR FOREIGN LANGUAGE - SECOND SEMESTER
The second semester course of first-year foreign language taken by itself is always granted an H area designator. It can count toward a humanities/social science course requirement even when the first semester “elements” course is not taken.
For example, a student successfully completing AS.090.101 and AS.090.102 Elementary German would receive eight H credits. Note that while four H credits would be given for AS.090.102 if taken alone, no H credits are given for AS.090.101 “elements” if taken alone.

Visit the E-catalog about language courses for more information.

5.2 Writing Requirement

Whiting School of Engineering students must take two courses (6 credits) that are “writing intensive.” Mechanical Engineering and Engineering Mechanics majors must take two courses that develop writing skills essential for success as an engineer.

- EN.530.403 Mechanical Engineering Senior Design Project I is counted as one of the two courses.
- The second “writing intensive” course must be either...
  - AS.060.100 Introduction to Expository Writing
  - AS.060.113 or AS.060.114 Expository Writing – (either one; both cannot be counted for H/S credit)
  - AS.220.105 Introduction to Fiction and Poetry Writing.

Other writing intensive courses are not accepted for the Mechanical Engineering and Engineering Mechanics writing requirement, because they do not have the necessary required level of intensity in writing instruction. If there is an unusual circumstance that prevents a student from taking one of the approved courses, the student must request an exception from his or her faculty advisor. Any approved exceptions must be noted on a Course Exception Waiver Form.

5.2.1 Take the Writing Intensive Course – Freshman Year Recommended

The Expository Writing and Intro to Fiction and Poetry Writing courses reserve at least half of the seats for freshman each semester. While this ensures that most or all freshmen will be able to take the class, it may be problematic for upperclassmen to register. In fact, seniors are excluded from the courses unless special permission is granted by the writing programs.

Students are strongly encouraged to take the writing course in the freshman year.

5.2.2 AS.220.105 Intro to Fiction and Poetry Writing – Don’t Miss the First Week!

Note that the instructors of AS.220.105 Intro to Fiction and Poetry Writing emphasize the importance that students attend the very first class sessions, as the course’s assignments are highly front-loaded. In other words, most of the courses’ assignments are due early in the semester, with continued discussion and lecture throughout the semester. It is recommended that students not add this course during the “add/drop” period, especially after the second class.
5.3 Distribution and Depth Requirements

The Humanities and Social Sciences are of great importance in broadening an engineering student’s education and the development of an inquisitive and critical mind.

No more than one “Whiting School” H/S Course may be taken

The department recognizes that some students’ may take an “H” or “S” course in the Whiting School of Engineering, including those seeking a Whiting School minor like Entrepreneurship and Management.

Mechanical Engineering and Engineering Mechanics majors may count no more than one course that is taught in the Whiting School (numbered EN.xxx.xxx) with an “H” or “S” course area towards this requirement.

The following department codes, which occupy the first three digits of course numbers at Johns Hopkins (e.g. EN.530.xxx), are offered in the Whiting School and are subject to this restriction:

- EN.500 - General Engineering
- EN.510 - Materials Science and Engineering
- EN.520 - Electrical and Computer Engineering
- EN.530 - Mechanical Engineering
- EN.540 - Chemical and Biomolecular Engineering
- EN.553 - Applied Math and Statistics
- EN.560 - Civil Engineering
- EN.570 - Geography and Environmental Engineering
- EN.580 - Biomedical Engineering
- EN.601 - Computer Science
- EN.650 - Information Security Institute
- EN.660 - Entrepreneurship and Management / Center for Leadership Education
- EN.661 - Professional Communication
- EN.662 - Engineering Management
- EN.670 - Institute for Nanobiotechnology

Six H/S Credits must be Upper-Level

The free electives in Humanities and Social Science courses must be chosen to obtain sufficient depth. To achieve these objectives, at least six H/S credits must be taken as “upper level,” at the 300-level or higher.
**Intermediate Language could replace Upper-Level Credits**

With the student’s advisor’s approval, intermediate-level language courses (200-level or higher) may be taken to satisfy this depth requirement.

This is beyond what is described in Section 5.1, where the first two semesters of any elementary course in a foreign language could count toward the H/S requirement, as long as both semesters are successfully completed.

**H/S Courses in the Krieger School of Arts and Sciences**

Though some courses in the Whiting School of Engineering may offer a course that carries an “H” or “S” course area, the department believes that H/S courses should be taught or supervised by full-time faculty in the Krieger School of Arts and Sciences, who are the experts in humanities and social sciences. Students should be taking all H/S courses from the Krieger School except in extenuating circumstances that would necessitate taking a course elsewhere.
Bachelor of Science Degree in the Mechanical Engineering major

6 MECHANICAL ENGINEERING CURRICULUM

6.1 Our Mission

The mission of the B.S. in Mechanical Engineering degree program is to provide a rigorous educational experience that prepares a select group of students for leadership positions in the profession and a lifetime of learning. The faculty is committed to maintaining a modern and flexible curriculum which, building on a foundation of basic sciences and mathematics, develops a solid education in the mechanical engineering sciences. The aim of the Mechanical Engineering program is to build competence in the analysis, design and development of thermal, fluid, and mechanical systems; to promote a broad knowledge of the contemporary social and economic context, and to develop the communication skills necessary to excel.

6.2 Introduction

The program provides fundamental courses in thermal and mechanical systems. Both laboratory instruction and the senior design project allow all students hands-on experience. Each student’s program of study is planned in consultation with his or her faculty advisor. Students are encouraged to develop depth in one or two areas chosen from:

- Aerospace Engineering
- Biomechanical Engineering
- Robotics
- Mechanics and Design
- Fluid Mechanics and Thermofluid Systems.

The choice of academic interest is typically decided in the junior year after consultation with the faculty advisor. If you are ready to choose an academic interest prior to your junior year, please discuss your intentions with your advisor.

6.3 Educational Objectives

Our primary objective is to educate an exceptional group of engineers who, after graduation, will be (1) successful and on track to become leaders among their peers in industry, government laboratories and other organizations, and (2) advanced students in the best graduate programs.
6.4 Mechanical Engineering Curriculum

A program of no fewer than **126 credits** must be completed to be eligible for the bachelor’s degree. All undergraduate students must follow a program approved by a faculty member in the department who is selected as the student’s advisor.

The Mechanical Engineering curriculum is structured as follows:

*Science (13 credits; grades below C- not accepted)*

- EN.530.123 Introduction to Mechanics I
- EN.530.124 Introduction to Mechanics II *(required for most students, even with AP credit)*
- AS.171.102 (or AS.171.108) Physics II
- AS.173.112 Physics Lab II *(required for all students, even with AP credit)*
- AS.030.101 Introduction to Chemistry I

*Mathematics (19 credits; grades below C- not accepted)*

- AS.110.108 Calculus I
- AS.110.109 Calculus II
- Calculus III options – choose one
  - AS.110.202 Calculus III
  - AS.110.211 Honors Multivariable Calculus
- Linear Algebra/Differential Equations options – choose one
  - EN.553.291 Linear Algebra/Differential Equations (4 credits)
  - Both AS.110.201 Linear Algebra (4 credits) and AS.110.302 Differential Equations (4 credits)
- Probability and Statistics at the .300-level or above (e.g. EN.553.310 or EN.553.311 Probability and Statistics. AP Statistics is not accepted.)

*Humanities and Social Sciences (18 credits)*

- See Humanities and Social Sciences, Section 5

*Required Engineering Courses (50 credits; grades below C- not accepted)*

- EN.530.107/108 MechE Undergraduate Seminar I/II
- EN.530.111 Intro to MechE Design and CAD
- EN.500.114 Gateway Computing – MATLAB
  - EN.500.114 Gateway Computing - MATLAB is the strongly preferred computing option.
  - Some students might take EN.500.112 Gateway Computing - Java to work toward a Computer Science or Robotics minor. It is recommended to take the one-credit online course EN.500.134 MATLAB Bootcamp to learn MATLAB.
  - Section 2.8 of this manual describes alternate courses that can be taken in AP Computer Science credit is earned.
- EN.530.115/116 Mechanical Engineering Freshman Laboratory I/II
- EN.560.201 and EN.560.211 Statics and Mechanics of Materials and Lab
- EN.530.202 and EN.530.212 Dynamics and Lab
- EN.530.215 and EN.530.216 Mechanics Based Design and Lab
- EN.530.231 and EN.530.232 MechE Thermodynamics and Lab
- Electronics options – choose one
  - EN.530.241 and EN.530.243 Electronics and Instrumentation and Lab (preferred)
  - EN.520.230 and EN.520.231 Mastering Electronics and Lab (acceptable)
- Manufacturing options – choose one
  - EN.530.254 Manufacturing Engineering
  - EN.530.204 Manufacturing Engineering Theory and EN.530.205 Manufacturing Engineering Laboratory
- EN.530.327 and EN.530.329 Introduction to Fluid Mechanics and Lab
- EN.530.334 and EN.530.335 Heat Transfer and Lab
- EN.530.343 and EN.530.344 Design and Analysis of Dynamic Systems / Lab
- EN.530.352 Materials Selection
- Management and Leadership options – choose one
  - EN.660.361 Engineering Management and Leadership (3 credits)
  - Both EN.660.105 Foundations of American Enterprise (3 credits) and EN.660.341 Business Process and Quality Management (3 credits).

Mechanical Engineering Electives (9 credits; grades below C- not accepted)
- Three courses (300-level or higher), any of...
  - EN.530.xxx – All courses in Mechanical Engineering 300-level or higher
  - EN.500.308 and/or EN.500.309 Multidisciplinary Design
  - EN.520.495 Microfabrication Laboratory
  - EN.580.451 Cell and Tissue Engineering
  - EN.580.452 Cell and Tissue Engineering II

Technical Electives (9 credits; grades below C- not accepted)
- Two (E), (Q), or (N) courses at or above the 300-level, chosen from any combination of courses in engineering, basic sciences, or mathematics chosen in consultation with the student’s advisor, plus...
- Either one more (E), (Q), or (N) course at or above the 300-level, or one of these computing options:
  - EN.601.220 Intermediate Programming
  - EN.601.226 Data Structures
• **NOTE:** The EN.500.11x Gateway Computing and EN.500.13x Bootcamp computing courses **do not count** as a technical elective.

**Capstone Design (8 credits; grades below C- not accepted)**
- EN.530.403 and EN.530.404 Mechanical Engineering Senior Design I and II

### 6.4.1 4-Year Course Planning – Help is Available
It is important to plan all four years of your coursework as early as possible, keeping in mind the frequency of courses offered so you can enroll in all courses required for your degree. Your faculty advisor and Academic Program Manager Mike Bernard offer help with such course planning. You are welcome to contact Mike to arrange a meeting.

### 6.4.2 Definition of Electives
There are two types of electives in the Mechanical Engineering programs:

- **Mechanical Engineering Electives** are the following courses:
  - Courses with course number prefix “EN.530” and are at the .300-level or higher.
  - EN.500.308 and/or EN.500.309 Multidisciplinary Engineering Design
  - EN.520.495 Microfabrication Laboratory
  - EN.580.451 Cell and Tissue Engineering
  - EN.580.452 Cell and Tissue Engineering II

- **Technical Electives** are any courses that carry a course area of E (engineering), Q (quantitative/math), or N (natural science) and are at the .300-level or higher. These could include Mechanical Engineering courses EN.530.xxx at the .300-level or higher, as well. The department will accept up to one computing course as a technical elective. See Sections 6.4 and 7.4 for details.

### 6.4.3 Choosing Mechanical Engineering Electives
Students are encouraged to develop depth in one or two areas within mechanical engineering. Examples are provided below. Note that many of the elective courses below are taught every other year.

**Mechanics, Materials, and Design**
- EN.530.310 Reverse Engineering and Diagnostics
- EN.530.381 Engineering Design Process
- EN.530.405 Mechanics of Solids and Structures
- EN.530.414 Computer-Aided Design
- EN.530.418 Aerospace Structures

**Robotics**
- EN.530.414 Computer-Aided Design
- EN.530.420 Robot Actuators and Sensors
- EN.530.421 Mechatronics

- EN.530.430 Applied Finite Element Analysis
- EN.530.438 Aerospace Materials
- EN.530.455 Additive Manufacturing
6.5 **Aerospace Engineering Track**

A student may specialize in Aerospace Engineering once a solid background in the fundamentals of Mechanical Engineering has been developed through the basic ME courses. This track requires knowledge and background in several fields including advanced dynamics, flight mechanics, propulsion, aerospace materials and structures, signal processing, control systems, astrophysics and space systems. Students pursuing the Aerospace Engineering Track are required to take **at least five** of the following courses.

**SPRING 2022 (confirmed) and SPRING 2024 (anticipated)**
- EN.530.432 Jet and Rocket Propulsion (Spring 2022 and Spring 2024)
- EN.530.427 or EN.530.627 Intermediate Fluid Mechanics (Spring 2024 only)

**FALL 2022 (confirmed) and FALL 2024 (anticipated)**
- EN.530.424 or EN.530.624 Dynamics of Robots and Spacecraft
- EN.530.427 or EN.530.627 Intermediate Fluid Mechanics (Fall 2022 only)
- EN.530.483 or EN.530.683 Applied Computational Modeling in Aerodynamics and Heat Transfer
- AS.171.321 Introduction to Space Science and Technology
- AS.270.318 Remote Sensing of the Environment
SPRING 2023 and SPRING 2025 (anticipated)
- EN.530.425 Mechanics of Flight
- EN.530.427 or EN.530.627 Intermediate Fluids
- EN.530.438 or EN.530.638 Aerospace Materials
- EN.530.470 Space Vehicle Dynamics and Control

FALL 2023 and FALL 2025 (anticipated)
- EN.530.418 or EN.530.619 Aerospace Structures (formerly Aerospace Structures and Materials)
- EN.530.424 or EN.530.624 Dynamics of Robots and Spacecraft
- EN.530.483 or EN.530.683 Applied Computational Modeling in Aerodynamics and Heat Transfer
- AS.171.321 Introduction to Space Science and Technology

Any five of the courses listed above are required. A sixth course amongst this list, though not required is recommended.

For information on these courses and the frequency of course offerings, please consult the Registrar’s course schedule and Engineering Program for Professionals’ course schedule.

6.6 Biomechanics Track

A student may specialize in Biomechanics once a solid background in the fundamentals of Mechanical Engineering has been developed through the basic Mechanical Engineering courses. Students pursuing the Biomechanics Track within Mechanical Engineering are required to take at least four courses. Two among the four should be chosen from the biomechanics-oriented courses, indicated by an asterisk (*).

SPRING 2022 (confirmed) and SPRING 2024 (anticipated)
- EN.530.410 Biomechanics of the Cell*
- EN.530.426 Biofluid Mechanics* (not offered in Spring 2022, anticipated for Spring 2024)
- EN.530.441 Introduction to Biophotonics*
- EN.530.469 or EN.530.669 Locomotion Mechanics: Recent Advances* (not offered in Spring 2022, anticipated for Spring 2024)
- EN.530.672 Biosensing and BioMEMS*
- EN.580.457 Intro to Rehabilitation Engineering: Design Lab (Biomedical Engineering)

FALL 2022 (confirmed) and FALL 2024 (anticipated)
- EN.520.495 Microfabrication Laboratory
- EN.530.436 or EN.530.636 Bioinspired Science and Technology
• EN.530.446 Experimental Biomechanics*
• EN.530.468 or EN.530.668 Locomotion Mechanics: Fundamentals (Fall 2024 only)
• EN.530.469 or EN.530.669 Locomotion Mechanics: Recent Advances* (Fall 2022 only)
• EN.530.473 Molecular Spectroscopy and Imaging
• EN.530.474 or EN.530.674 Effective and Economic Design for Biomedical Instrumentation
• EN.580.456 Introduction to Rehabilitation Engineering (prerequisites EN.580.421 and EN.580.422 Systems Bioengineering I/II – which both have recommended pre-requisites and co-requisites)

SPRING 2023 and SPRING 2025 (anticipated)
• EN.530.410 Biomechanics of the Cell*
• EN.530.441 Intro to Biophotonics*
• EN.530.469 or EN.530.669 Locomotion Mechanics: Recent Advances*
• EN.580.457 Intro to Rehabilitation Engineering: Design Lab (Biomedical Engineering)

FALL 2023 and FALL 2025 (anticipated)
• EN.520.495 Microfabrication Laboratory
• EN.530.443 or EN.530.643 Fundamentals, Design Principles and Applications of Microfluidic Systems
• EN.530.445 Introduction to Biomechanics*
• EN.530.448 Biosolid Mechanics*
• EN.530.468 or EN.530.668 Locomotion Mechanics: Fundamentals
• EN.530.474 Effective and Economic Design for Biomedical Instrumentation
• EN.580.456 Introduction to Rehabilitation Engineering (prerequisites EN.580.421 and EN.580.422 Systems Bioengineering I/II – which both have recommended pre-requisites and co-requisites)

6.7 Tracks – Recognition, Grades and When they Count

6.7.1 Letter Grades only for Courses Counting Toward a Track
Any course being counted toward a track, whether or not the course is necessary for the degree requirements, must be taken for a letter grade. S/U grades are not accepted for track courses.

6.7.2 Track Courses Counting toward Degrees
As long as an eligible course is taken in a student’s first four years (or eight semesters) as an undergraduate student it will count toward a track. This includes any eligible course being counted for the B.S. degree, or double-counted for the combined B.S. and M.S.E. degrees, or being counted exclusively for the M.S.E. degree.
Students who are earning only B.S. degrees but need a ninth or tenth semester to complete the degree can use eligible courses taken in those semesters to count toward a track.

Those earning their B.S. degrees at the end of the fourth year (or eighth semester) and return to earn the M.S.E. degree cannot take classes in the ninth semester and beyond to earn a track.

### 6.7.3 Recognition

Upon completion of the Aerospace or Biomechanics track, the department will send a letter of congratulations of this achievement.

The department recently received clarification from the Whiting School of Engineering that with Maryland Higher Education Commission requirements, we can no longer list track achievements on transcripts or in transcript notes. We are happy to provide a letter to another institution, potential employer, or other entity a letter describing the track and how a student achieved it. Contact the academic staff at me-academic@jhu.edu if you would like such a letter.
## Sample Mechanical Engineering Programs

**Sample Mechanical Engineering Program for students beginning with Calculus I**

This is but one version of ways to complete the program. Total Credits - B.S. Degree in Mechanical Engineering - 126

* - Students are encouraged to take AS.110.302 Differential Equations (4) and AS.110.201 Linear Algebra (4) instead of the combined EN.553.291 L.A./D.E. course (4) if they can work the additional four credits into their schedule. An advantage of taking the courses separately is that AS.110.302 Differential Equations can be counted as a Technical Elective.

** - Students must take either

A) EN.660.361 Engineering Management and Leadership (formerly Engineering Business and Management) or

▲ - EN.530.343/344 Design and Analysis of Dynamic Systems (DADS) and Lab requires enrollment in or prior completion of EN.530.202/212 Dynamics with a minimum C- grade.

Sample Mechanical Engineering Program for students beginning with Calculus II

This is but one version of ways to complete the program. Total Credits - B.S. Degree in Mechanical Engineering – 126

* - Students are encouraged to take AS.110.302 Differential Equations (4) and AS.110.201 Linear Algebra (4) instead of the combined EN.553.291 L.A./D.E. course (4) if they can work the additional four credits into their schedule. An advantage of taking the courses separately is that AS.110.302 Differential Equations can be counted as a Technical Elective, as long as it is not being counted as one of the courses helping to meet the required 19 math credits.

** - Students must take either
A) EN.660.361 Engineering Management and Leadership (formerly Engineering Business and Management) or
B) EN.660.105 Foundations of American Enterprise (formerly Introduction to Business) and EN.660.341 Business Process

▲ - EN.530.343/344 Design and Analysis of Dynamic Systems and Lab (DADS) requires enrollment in or prior completion of EN.530.202/212 Dynamics with a minimum C- grade.

Bachelor of Science Degree in the
Engineering Mechanics major

7 ENGINEERING MECHANICS CURRICULUM

7.1 Our Mission

The mission of the B.S. in Engineering Mechanics degree program is to provide a rigorous educational experience that prepares a select group of students for leadership positions in the profession and a lifetime of learning. The faculty is committed to maintaining a modern and flexible curriculum which, building on a foundation of basic sciences and mathematics, develops a solid education in the mechanical engineering sciences. The aim of the Engineering Mechanics program is to build competence in the analysis, design and modeling of fluid and mechanical systems, to promote a broad knowledge of the contemporary social and economic context, and to develop the communication skills necessary to excel.

7.2 Introduction

The Engineering Mechanics program concentrates on the scientific fundamentals of the behavior of solids and fluids. The program is designed to be highly flexible while providing the student with a broad scientific and technical background in the mechanical sciences.

The curriculum is intended to enable graduates to explore fundamental questions in many fields of engineering. Emphasis is placed on the basic sciences (mathematics, physics, and chemistry) and on the analysis, modeling, and design aspects of solid and fluid engineering systems. Although specific core courses are required, the student is encouraged and guided by his or her advisor to select an individual program of study, within ABET guidelines, according to the student’s particular goals. This program of study may range from a general study of mechanics or engineering science to specialized programs such as robotics, fluid dynamics, environmental engineering, mechanics of solids, experimental mechanics, dynamical systems, mechanics of materials, or biomechanics.

This flexibility makes the program ideal for double-majors and for those wishing to tailor a strong foundation for graduate work in a wide range of disciplines. All mathematics elective and technical elective courses must be at the .300-level or higher, unless approved by your faculty advisor.

7.3 Engineering Mechanics Educational Objectives

Our primary objective is to educate an exceptional group of science-oriented engineers who, after graduation, will be successful and on track to become leaders
among their peers (1) in the best graduate programs in engineering, science, medical schools, or law schools, and (2) in industry, government laboratories and other organizations.

### 7.3.1 Engineering Mechanics - Biomechanics Track

Engineering Mechanics (EM) is a highly flexible program, which is ideal for students who want to specialize in any area of mechanics, including biomechanics.

The essence of mechanics is the interplay between forces and motion. In biology, mechanics is important at the macroscopic, cellular, and subcellular levels. At the macroscopic length scale biomechanics of both soft and hard tissues plays an important role in computer-integrated surgical systems and technologies (e.g., medical robotics). At the cellular level, issues such as cell motility and chemotaxis can be modeled as mechanical phenomena. At the subcellular level, conformational transitions in biological macromolecules can be modeled using molecular dynamics simulation (which is nothing more than computational Newtonian mechanics), statistical mechanics, or using coarse-grained techniques that rely on principles from the mechanics of materials. In addition, much of structural biology can be viewed from the perspective of kinematics (e.g., finding spatial relationships in data from the Protein Data Bank).

Each student who pursues the Biomechanics track within the EM major, in consultation with his or her faculty advisor, will choose a set of six elective bio-oriented courses that best matches the student's interests. Many electives from other departments are acceptable.

### 7.3.2 Engineering Mechanics - Electives

The electives for the EM major are structured as follows:

**Engineering Science electives (12 credits, all upper-level undergraduate - .300-level or higher)**

- One course in solid mechanics
- One course in fluid mechanics
- One course in dynamics
- One course in materials
Engineering Mechanics electives (3 credits, all upper-level undergraduate - .300-level or higher)

- One additional course in the area of mechanics (i.e., fluids, solids, dynamics, or materials)

Technical Electives (18 credits, all upper-level undergraduate - .300-level or higher)

- Chosen from .300-level courses in engineering and the sciences in consultation with the student’s faculty advisor.

Example bio-oriented courses, which can be applied to the electives include (but are not limited to):

- AS.020.305 Biochemistry
- AS.020.346 Immunobiology
- AS.020.363 Developmental Biology
- AS.020.380 Chromatin, Chromosomes, and The Cell Nucleus
- AS.250.353 Computational Biology
- EN.520.495 Microfabrication Laboratory
- EN.530.410 Biomechanics of the Cell
- EN.530.426 Biofluid Mechanics
- EN.530.436 Bioinspired Science and Technology
- EN.530.441 Introduction to Biophotonics
- EN.530.443 Fundamentals, Design Principles and Applications of Microfluidic Systems
- EN.530.445 Introductory Biomechanics
- EN.530.446 Experimental Biomechanics
- EN.530.448 Biosolid Mechanics
- EN.580.456 Introduction to Rehabilitation Engineering
- EN.530.468 Locomotion Mechanics: Fundamentals
- EN.530.469 Locomotion Mechanics: Special Topics
- EN.530.473 Molecular Spectroscopy and Imaging
- EN.530.474 Effective and Economic Design for Biomedical Instrumentation
- EN.530.485 Physics and Feedback in Living Systems
- EN.540.409 Dynamic Modeling and Control
- EN.530.671 Statistical Mechanics in Biological Systems
- EN.530.672 Biosensing and BioMEMS

This is not an exhaustive list and not all of these courses must be taken. Rather, students who pursue the Biomechanics track will take at least six courses such as
those listed above. These six should be concentrated either at the cellular/subcellular length scale or in macroscopic biomechanics. Note that given the flexibility of the Engineering Mechanics program, it would be possible for students to satisfy both of these kinds of tracks simultaneously if they apply all of their elective courses towards this end.

7.4 **Engineering Mechanics Course Requirements**

**Basic Science (16 credits; grades of below C- not accepted)**
- A Physics course suite that covers mechanics:
  - Recommended option: EN.530.123/124 Introduction to Mechanics I/II
  - Another option: AS.171.101 or AS.171.107 Physics I, and AS.173.111 Physics Lab I
- AS.171.102 or AS.171.108 Physics II, and AS.173.112 Physics Lab II
- AS.030.101 Introduction to Chemistry I
- Another basic science elective

The mathematics requirements for the engineering mechanics program are either “Mathematics with a focus on **applications**” or “Mathematics with a focus on **fundamentals.**”

(Either…) **Mathematics with a focus on applications:**
(23 credits; grades below C- not accepted)
- AS.110.108 Calculus I
- AS.110.109 Calculus II
- AS.110.202 Calculus III (or AS.110.211 Honors Multivariable Calculus)
- EN.553.291 Linear Algebra/Differential Equations or [AS.110.212 Honors Linear Algebra or AS.110.201 Linear Algebra, plus AS.110.302 Differential Equations, the latter which can count as the “Another Mathematics Elective” below]
- Another Mathematics Elective
- Statistics Elective at the .300-level or above (e.g. EN.553.310 or EN.553.311 Probability and Statistics. AP Statistics is not accepted)

(or…) **Mathematics with a focus on fundamentals:**
(23 credits; grades below C- not accepted)
- AS.110.108 Calculus I
- AS.110.109 Calculus II
- AS.110.211 Honors Linear Algebra
- AS.110.212 Honors Multivariable Calculus
- AS.110.302 Differential Equations with Applications
- Probability and Statistics Elective at the 300 level or above (e.g. EN.553.310 or EN.553.311 Probability and Statistics. AP Statistics is not accepted.)
Humanities: (18 credits)

- See Humanities, Section 5 – six courses at least three credits each.

Required Engineering Courses (minimum of 27 credits; grades of D+, D, or D- not accepted)

I) INTRODUCTORY COURSES: The Mechanical Engineering introductory courses are the strongly recommended choice for introductory engineering but other options are accepted.

- EN.530.111 Introduction to MechE Design and CAD
- EN.500.114 Gateway Computing – MATLAB
  - EN.500.114 Gateway Computing - MATLAB is the strongly preferred computing option.
  - Some students might take EN.500.112 Gateway Computing - Java to work toward a Computer Science or Robotics minor. It is recommended to take the one-credit online course EN.500.134 MATLAB Bootcamp to learn MATLAB.
  - Section 2.8 of this manual describes alternate courses that can be taken in AP Computer Science credit is earned.
- EN.530.115/EN.530.116 MechE Freshman Laboratory I/II,

If choosing alternate introductory freshman engineering options, students must take one of these courses:

- EN.500.101 What is Engineering (recommended)
- EN.520.137 Introduction to Electrical and Computer Engineering
- EN.570.108 Introduction to Environmental Engineering

II) OTHER REQUIRED ENGINEERING COURSES:

- EN.560.201/EN.560.211 Statics and Mechanics of Materials and Lab
- EN.530.202/EN.530.212 Dynamics and Lab
- EN.530.215 Mechanics Based Design or EN.530.405 Mechanics of Solids and Structures
- EN.530.216 Mechanics Based Design Lab
- EN.530.231/EN.530.232 Thermodynamics Lecture and Lab
- EN.530.327/EN.530.329 Introduction to Fluid Mechanics Lecture and Lab

Engineering Science Electives (12 credits; grades below C- not accepted)

- One course at or above the 300-level in each of these disciplines:
  - solid mechanics
  - fluid mechanics
  - materials
  - dynamics
Engineering Mechanics Elective (3 credits; grades below C- not accepted)
- One course at or above the .300-level in the area of engineering mechanics

Technical Electives (minimum of 18 credits; grades below C- not accepted)
- Five (E), (Q), or (N) courses at or above the .300-level, chosen from any combination of courses in engineering, basic sciences, or mathematics chosen in consultation with the student’s advisor are required, plus…
- Either one more (E), (Q), or (N) course at or above the .300-level, or one of these computing options:
  - EN.601.220 Intermediate Programming
  - EN.601.226 Data Structures

NOTE: The EN.500.11x Gateway Computing and EN.500.13x Bootcamp computing courses do not count as a technical elective.

Capstone Design (8 credits)
- EN.530.403 and EN.530.404 Mechanical Engineering Senior Design I and II

7.5 Engineering Mechanics Elective Courses

Solid mechanics courses may be chosen from courses such as:
- EN.530.405 Mechanics of Solids and Structures*
- EN.530.414 Computer-Aided Design
- EN.530.417 / EN.530.618 Fabricatology
- EN.530.418 / EN.530.619 Aerospace Structures
- EN.530.438 Aerospace Materials
- EN.530.448 Biosolid Mechanics
- EN.530.605 Mechanics of Solids and Materials
- EN.530.606 Mechanics of Solids and Materials II
- EN.560.320 Structural Design
- EN.560.330 Foundation Design

Dynamics courses may be chosen from courses such as:
- AS.110.421 Dynamical Systems
- EN.530.343 and EN.530.344 Design and Analysis of Dynamic Systems and Laboratory
- EN.530.420 Robot Sensors and Actuators
- EN.530.421 Mechatronics
- EN.530.424 / EN.530.624 Dynamics of Robots and Spacecraft
- EN.530.470 Space Vehicle Dynamics and Control

* If not used to satisfy the Required Engineering Courses.
• EN.553.391 Dynamical Systems

Mechanics of materials courses may be chosen from courses such as:

• EN.530.352 Materials Selection
• EN.530.414 Computer-Aided Design
• EN.530.417 / EN.530.618 Fabricatology
• EN.530.418 / EN.530.619 Aerospace Structures
• EN.530.430 Applied Finite Element Analysis
• EN.530.438 / EN.530.638 Aerospace Materials
• EN.530.455 / EN.530.655 Additive Manufacturing
• EN.530.605 Mechanics of Solids and Materials
• EN.530.606 Mechanics of Solids and Materials II
• EN.510.311 Structure of Materials
• EN.510.312 Thermodynamics of Materials
• EN.510.313 Mechanical Properties of Materials
• EN.510.314 Electronic Properties of Materials
• EN.510.315 Physical Chemistry of Materials
• EN.560.320 Structural Design
• EN.560.330 Foundation Design
• EN.560.730 Finite Element Methods

Fluid mechanics courses may be chosen from courses such as:

• EN.530.418 / EN.530.619 Aerospace Structures
• EN.530.425 Mechanics of Flight
• EN.530.426 Biofluid Mechanics
• EN.530.427 / EN.530.627 Intermediate Fluid Mechanics
• EN.530.432 Jet and Rocket Propulsion
• EN.530.443 / EN.530.643 Fundamentals, Design Principles, and Applications of Microfluidic Systems
• EN.530.464 / EN.530.664 Energy Systems Analysis
• EN.530.483 / EN.530.683 Applied Computational Modeling in Aerodynamics and Heat Transfer

A program of no fewer than 126 credits must be completed to be eligible for the bachelor’s degree. All undergraduate students must follow a program approved by a faculty member in the department who is selected as the student’s advisor.
### 7.6 Sample Engineering Mechanics Programs

**Sample Engineering Mechanics Program** for students beginning with Calculus I taking the recommended mechanical engineering freshman course suite.

This is but one version of ways to complete the program. Total Credits - B.S. Degree in Engineering Mechanics – 126

* - Students are encouraged to take AS.110.302 Differential Equations (4) and AS.110.201 Linear Algebra (4) instead of the combined EN.553.291 L.A./D.E. course (4) if the additional four credits can fit into the schedule. An advantage of taking the courses separately is that AS.110.302 Differential Equations can count as a Technical Elective.

★ - Alternate introductory course sequence: 500.101 What is Engineering (3) or other acceptable introduction to engineering course, one of the introduction to computing course options, plus AS.171.101 or AS.171.107 Physics I (4), and AS.173.111 Physics I Lab (1)

The Engineering Mechanics program requires six full courses (18 credits) in Humanities and Social Sciences, and requires one writing course, and two courses at the 300 level or above.

BS Engineering Mechanics – Course Dependency Map

**BEGIN HERE**

- **110.108 Calculus I**
- **110.109 Calculus II**
- **630.101 Introductory Chemistry**
- **530.111 Intro to MechE Engineering and CAD and 530.115 MechE Freshmen Lab or other intro to engineering course**

**Required Courses**

- 530.231 / 232 Thermodynamics and Lab
- 500.114 Gateway Computing – MATLAB and 530.116 MechE Freshmen Lab or other intro to programming course
- 530.129/124 Intro to Mechanics I/II or 171.103 or 171.107 / 173.111 Physics I and Lab

**Next Course Required**

- 530.201 / 211 Statics and Mechanics of Materials / Lab
- 530.202 / 222 Dynamics and Lab
- 500.105 or 500.108 MechE Undergraduate Seminar I/II

**Core Electives**

- Technical Elective 1
- Technical Elective 2
- Technical Elective 3
- Technical Elective 4
- Technical Elective 5
- Technical Elective 6

**Core Electives**

- Humanities / Social Science elective 1
- Humanities / Social Science elective 2
- Humanities / Social Science elective 3
- Humanities / Social Science elective 4
- Humanities / Social Science elective 5

**Core Electives**

- Basic Science, Mathematics, and Humanities / Social Science in other departments; some courses have science and math prerequisites not mapped here. See all.jhu.edu/classes for info.

**Advanced Engineering**

- Mechanical Engineering elective

8 Senior Design

The Senior Design Project, a unique two-semester course, is the capstone of Johns Hopkins’ Mechanical Engineering program. In the class, students, working in small teams, tackle specific design challenges presented by industry, government, and non-profit organizations. The sponsors provide each team with the funds for materials, access to world-class resources, and the technical contacts. Ultimately, each team conceptualizes a novel solution to the sponsor’s problem and then designs, constructs, and tests a real-world prototype.

The course requires students to draw upon the four years of knowledge and experience they have gained in their engineering studies and put it to practical use. Throughout the year, they produce progress reports as they design, build, and test the devices they are developing. Combining engineering theory, budgeting, and time management with interactions with real clients, the senior design project is critical to students’ preparation for the transition from school to the workplace.

Visit these pages for more information:

- Senior Design
- Information for Juniors to prepare for Senior Design

Initial communication to Juniors about Senior Design preparations may occur as early as the early-Fall semester of the Junior year, but no later than early-Spring of that year.

9 Engineering for Professionals – Good Courses for Electives

Many interesting and relevant online Mechanical Engineering and other engineering courses are available via our Engineering for Professionals program.

- Some Engineering for Professionals courses can be counted toward the elective sections of our bachelor’s degrees. Up to two can count toward the master’s degree.
- Visit the EP Courses page to find available courses. The page can be filtered to select Mechanical Engineering courses.
- Please discuss proposed Engineering for Professionals courses with our faculty advisor to confirm that they would qualify for your degree.
- The course registration process is different from the standard registration in the Student Information System (SIS). For instructions to register, visit the Mechanical Engineering Undergraduate Academic Advising page > Course Registration Instructions...
## 10 Study Abroad

The University offers opportunities to study abroad through the Office of Study Abroad in Levering Hall through one-semester exchange and other study programs. Pre-approved programs are available for Mechanical Engineering students at various universities that fit our curriculum, typically in the first semester of the junior year. Other programs can be crafted for other universities and semesters, as long as students begin planning early.

When considering a study abroad program, requirements like knowledge of the local language must be taken into account.

### 10.1 Comillas Pontifical University - Madrid

The Comillas Pontifical University in Madrid, Spain offers an international engineering program in their ICAI School of Engineering. The program offers two full-load semesters of engineering courses, along with additional courses in Spanish language, and European and Spanish culture. Courses may be taken in English and Spanish.

Johns Hopkins University has an academic collaboration agreement with Comillas and strongly encourages students to consider participation in this program.

## 11 Graduation and Commencement

We celebrate the accomplishment of your graduation in a number of ways.

### 11.1 Honors

There are three methods to recognize our department’s outstanding students:

- Membership in Pi Tau Sigma
- Honors upon graduation
- Convocation awards
11.2 **Pi Tau Sigma**

Juniors and seniors who demonstrate high academic and service achievement can be inducted into the Tau Alpha Chapter of Pi Tau Sigma, the national honorary mechanical engineering fraternity. Members, who are inducted twice yearly, are invited to participate in service-oriented events that benefit the entire Mechanical Engineering community.

11.3 **Departmental Honors and University Honors**

Upon graduation, all students earning a cumulative grade point average of 3.50 or higher are granted Departmental Honors and University Honors. Honorees are recognized at Commencement as well as on their transcripts and permanent University records.

11.4 **Convocation**

The department recognizes outstanding students at the Whiting School’s annual Convocation awards ceremony in early May.

- The **James F. Bell Award** recognizes outstanding research and scholarly achievement in mechanical engineering.
- The **Creel Family Teaching Assistant Award** recognizes the best teaching assistants in Mechanical Engineering.
- The **Charles A. Miller Award** recognizes outstanding academic achievement by an undergraduate in mechanical engineering.
- The **Robert George Gerstmyer Award** recognizes outstanding undergraduate achievement in mechanical engineering.
- The **American Society of Mechanical Engineering award** is given in recognition of outstanding effort and accomplishment on behalf of the JHU ASME student chapter.
- The **William N. Sharpe, Jr. Award for Student Involvement**, named after Professor Emeritus William N. Sharpe, recognizes significant leadership or achievement in extracurricular activities.

These awards are usually awarded every year, but occasionally an award may not be offered. Other awards not listed here may occasionally be awarded.

12 **Senior Exit Interviews**

A requirement for graduation is the Senior Exit Interview. Several weeks before commencement, seniors are required to complete an online Senior Exit Interview.
survey and arrange an exit interview with the Department Head or designated faculty or staff.

13 The Fundamentals of Engineering Professional Exam

Consider taking the "Fundamentals of Engineering" (FE) Exam, which is available through the National Council of Examiners for Engineering and Surveying (NCEES) for all U.S. states! The computer-based exam is available year-round.

The benefits of professional licensure:

- Demonstrates that you’ve accomplished a recognized standard of professional excellence,
- Distinguishes you from others in your profession,
- Provides career options and opportunities that you might not otherwise have,
- Serves as a protection of public health, safety, and welfare by ensuring a specific level of expertise.

A student can take the exam beginning during the final semester of one’s BS degree or any time after the degree completion.

The Department of Mechanical Engineering will cover the examination fees for five students who will take the exam! Please contact Academic Program Manager Mike Bernard at me-academic@jhu.edu for details.

14 The Combined Five-Year Bachelor’s / Master’s Program

The Mechanical Engineering department offers a combined five-year Bachelor’s / Master’s (BS/MSE) program for Mechanical Engineering and Engineering Mechanics majors.

This is an excellent program for individuals who would like to earn Master's Degrees quickly. The degree will generally increase a student's chances for higher quality employment than would a Bachelor's Degree.

14.1 Eligibility and Application Process

This program is available only to Mechanical Engineering or Engineering Mechanics majors at the Johns Hopkins University.

There are two application deadlines during the course of the year. Juniors can apply for the winter review period in January, and rising seniors can apply for the summer review period in June.
14.2 Whiting School 50% Tuition Fellowship

The Whiting School of Engineering will provide a 50% tuition fellowship to all Johns Hopkins alumni who have completed eight semesters. Mechanical Engineering BS/MSE students will be eligible for this fellowship beginning their ninth semester.

14.3 Master’s Degree Requirements

The requirements for an M.S.E. in Mechanical Engineering are described in Sections “A” and “B,” where both sections must be met:

SECTION A: Satisfactory completion of eight one-semester advanced courses approved by your advisor, as follows:

a) At least four courses must be at the graduate level (xxx.600 or higher, up to two Engineering for Professionals xx5.4xx or higher).

b) No more than four courses may be at the advanced undergraduate level (full-time programs xxx.400 – xxx.499, Engineering for Professionals xx5.3xx).

c) At least two courses should be in applied mathematics, numerical analysis, or computational methods. This requirement can be waived in writing by your advisor, if sufficient prior preparation in these areas can be demonstrated.

d) Ineligible Courses: EN.530.800 Independent Study, EN.530.820 MSE All-Course - Graduate Research, and other departments’ Graduate Research, Independent Study, and Special Studies are not eligible courses to complete Section A’s requirement.

e) At least 4 of 10 courses, or at least 3 of 8 courses if writing an essay – must be Mechanical Engineering or related courses:
   o EN.530.4xx or higher - Mechanical Engineering
   o Any of these courses:
     ▪ EN.580.451/452 (Fall/Spring) – Cell and Tissue Engineering
     ▪ Intro to Linear Systems – any one of EN.530.616, EN.520.601, or EN.580.616.
     ▪ EN.560.772 Nonlinear Finite Element Methods
     ▪ EN.560.773 Finite Element Methods
     ▪ EN.520.495 Microfabrication Engineering
     ▪ EN.520.773 Advanced Topics in Fabrication and Microengineering
   o EN.535.xxx – courses from the Engineering for Professionals (EP) program, no more than two “EP” courses can count.
SECTION B: In addition to the eight courses above, students must also complete either two more courses or an essay:

COURSE OPTION

a) **Two additional one-semester graduate-level courses** (xx.xxx.6xx or higher, Engineering for Professionals EN.xx5.4xx or higher).

b) **EN.530.820 MSE All-Course - Graduate Research** - one of these two courses can be EN.530.820 MSE All-Course - Graduate Research. Students must also have completed the appropriate Responsible Conduct of Research and Research Laboratory Safety courses.

c) **Ineligible Courses:** EN.530.800 Independent Study, EN.530.821 MSE Essay - Research and Writing, EN.530.822 MSE Essay – Co-Op, and other departments’ Graduate Research, Independent Study, and Special Studies are not eligible courses to complete Section B’s requirement.

ESSAY OPTION

- An M.S.E. essay (the official title of master’s theses at Johns Hopkins) acceptable to your advisor and one other eligible reader.

If an essay is going to be written, students must register for **EN.530.821 MSE Essay - Research and Writing**, **EN.530.822 MSE Essay – Co-Op** every semester that he or she works on a master’s essay. This is separate from the Ph.D. dissertation.

This “Pass/Fail” course does not count as one of the eight courses required in addition to the thesis. The course is generally the equivalent of six credits and can be taken in one semester or split into three-credit courses taken over two semesters. If a student needs subsequent semesters to continue thesis work, he or she can simply register for the same course each semester.

For the essay, the Responsible Conduct of Research and Research Laboratory Safety courses described elsewhere in this manual must be completed.

### 14.4 Master’s Degree Timeline

Combined 5th Year Master’s students can generally expect to complete degrees in this timeframe:

**Junior/Senior Undergraduate Years**

- Double-count two .400-level academic courses from the Bachelor’s Degree.
- Take two courses that count for the master’s degree but do not count for the Bachelor’s Degree.
Fifth Year, Semester 1
- Complete required introductory courses: Academic Ethics, Title IX, and Opioid Awareness
- Take 3 academic courses
- If taking or planning to take a research course, complete required Lab Safety and Responsible Conduct of Research courses

Fifth Year, Semester 2
- All-Course: Take 3 academic courses and graduate.
- Essay:
  - Complete required Lab Safety and Responsible Conduct of Research courses
  - Take 2 academic courses, begin research, begin writing the essay
  - Semester 3 – complete the essay, have readers approve, submit essay to the library, and then graduate.

If students do not take two courses outside the bachelor’s degree in their Undergraduate Years, they may have to return for a third semester. It is not recommended to take more than three courses in a semester. Please talk to your advisor first if you want to take more than three courses in one semester.

14.5 Bachelor's/Master's Course Double Counting

Students either in a bachelor's/master's program or seeking a master's degree in the Whiting School, after having earned a Whiting School or Krieger School of Arts and Sciences bachelor's degree may double-count two courses (.400-level or higher) to both programs with the permission of the master's faculty advisor.

Information is available on the Whiting School Academic Policies page, then select “Policy on Double-Counting Courses.”

15 Master of Science in Engineering Management

The Whiting School of Engineering offers a Master of Science degree in Engineering Management (MSEM). This program bridges the gap between technology and business by equipping students with the technical expertise and leadership skills they need to advance their career in the fast-paced world of technology. Just ten courses are required to complete this advanced degree:
- Five advanced courses to fulfill the management concentration, including one capstone course that integrates and applies knowledge gained throughout the program.
- Five advanced courses in a declared technical area of engineering or applied science.

16 Libraries

The Milton S. Eisenhower Library offers a variety of online, research, and book lending services.

We have a dedicated librarian who will help students with finding research information, library services, and other resources. The librarian also advocates and budgets for subscribed online resources. Mr. Stephen Stich is the librarian for the Department of Mechanical Engineering. He welcomes your inquiries at sstich@jhu.edu.

The Library also purchases books and journals based on departmental requests. Student requests for books and journals should be discussed with their advisor who may communicate the request to the faculty member designated as the Library Liaison, currently Professor Jaafar El-Awady, who is located at Latrobe 124, and can be contacted at jelawady@jhu.edu or 410-516-6683.

17 Internships, Scholarships, Jobs, and Careers

The Johns Hopkins University and the Whiting School of Engineering offer resources to help you find internships during the summer months, assistance in the process of searching for jobs before and after graduation, and help in determining your career path and identifying opportunities. The department will forward opportunities it receives to students.

You are strongly encouraged to take advantage of these resources, as successful career and opportunity planning begins with you.

17.1 Internships, Research Positions, and Jobs

Information regarding research positions, internships, study abroad, career planning, scholarships, grants, and fellowships are linked to the “After You Graduate” page.
17.2 Scholarships

Information on scholarships is available on the “Scholarships and Fellowships” bar of the Mechanical Engineering “Academic Advising – Undergraduate” page.

17.3 Careers and Career Planning

The Life Design Lab at Homewood offers practical advice on determining a career path, resume preparation, interviewing, appropriate dress, and on-campus recruiting by companies.

You can set up a Handshake account to receive information on the latest career recruiting events and surf their site for the other services offered. The Life Design Lab also welcomes you to visit at available drop-in hours to discuss your questions and get help with your career planning decisions.

Also, visit the department’s Careers and Life page for an undergraduate Career Guide and information on planning, networking, and job hunting.

18 Mechanical Engineering Undergraduate Student Council (MUSC)

MUSC is a student-run organization that focuses on improvements to the department as it applies to the undergraduate students. It is comprised of nine members: two students from each of the four class levels.

Projects include planning recreational activities for the department, suggesting improvements and additions to the curriculum, requesting updates in department resources, and so on. Every year, the student representatives generally choose one major issue that they believe requires immediate attention. For example, recent years’ issues led to the creation of a new intersession CAD course, requiring a CAD course for the degree, and annual updates to this manual.

Any student who has ideas for changes, updates, and improvements is strongly encouraged to speak to the class representatives. Freshman appointments for class representatives are made in the Fall.
19 Student Groups

There are many opportunities to participate in student groups, professional engineering clubs, team projects, and competitions. Among these organizations are events, along with their websites are:

- **ASME**, the American Society of Mechanical Engineers
- **AIAA**, the American Institute of Aeronautics and Astronautics
- **Blue Jay Racing**
- **Design, Build, Fly**
- **Hopkins Organization of Multicultural Engineers and Scientists**
- **Hopkins Rocketry** - the Astrojays
- **WoMEN** – Women of Mechanical Engineering Network

Campus-wide student groups, clubs, athletics, and activities are available to everyone.

20 Office of Student Disability Services

The Office of Student Disability Services (SDS) assists full-time undergraduate and graduate students in the Krieger School of Arts and Sciences and the Whiting School of Engineering with disability concerns, in compliance with the provisions of the Americans with Disabilities Act of 1990 (ADA) and Section 504 of the Rehabilitation Act of 1973.

SDS assists the University community in understanding the effects of disabilities and in eliminating the physical, technical, attitudinal and programmatic barriers that limit the range of opportunities for students with disabilities, as well as provides individuals with reasonable accommodations. The SDS maintains and protects the confidentiality of individual records as required by law.

For additional information and to access the services of the SDS office, view their website, call 410-516-4720, or e-mail studentdisabilityservices@jhu.edu. You may also visit their office in 385 Garland Hall.

21 Laboratory Safety

Lab Safety is the responsibility of all who use, maintain, or visit the labs within Mechanical Engineering. Laboratory researchers are responsible for working with
the principal investigator to become familiar with the appropriate hazard information and safety policies before performing any work.

Visit the Homewood Campus Laboratory Safety page for important information.

For each lab, a Principal Investigator (PI) is assigned. That person is responsible for the safe operation of the lab, training on all chemicals in the work area, the training of the persons on the equipment within the lab, and is a ready source to answer any questions on a specific lab about its operation and all safety aspects. The PI’s for each lab are listed on the entrance door to each lab.

22 WSE Manufacturing

The WSE Manufacturing facilities and student machine shop is located in the basement of the Wyman Park Building, and is open to students, faculty, and staff across the Johns Hopkins University. To work in the student machine shop, an orientation regarding shop safety, shop rules, and equipment operations is required.

23 Computing

There are a cornucopia of computing facilities and services available to the Johns Hopkins community. The Information Technology page offers an overview of the IT Organization, its projects and services, support for applications and general questions, and news about emerging technologies and strategic imperatives, as well as e-mail, web, and file sharing services.

23.1 JHU Information Technology

Information Technology at Johns Hopkins is the online resource for IT-related information. Their primary focus is to support the missions of the Johns Hopkins Institutions and provide technology solutions for faculty, staff, patients, and students in support of teaching, research, and patient care.

This Web site serves as a repository for all IT-related information at Johns Hopkins. You will find a lot of useful information within this site, including an overview of the IT Organization, its projects and services, support for applications and general questions, and news about emerging technologies and strategic imperatives.

23.2 WSE Information Technology

WSE IT is tasked with supporting the IT needs of the Whiting School community.

23.3 Software Downloads

The university owns licenses for many software packages, many which may be downloaded. Please visit the Software Downloads page to learn more.
23.4 Academic Computer Lab – Krieger Hall

The Academic Computer lab, which offers a wide variety of Mac and Windows operating systems loaded with all kinds of software: Matlab, Mathematica, Microsoft Office, Adobe products and more are available in 160 Krieger Hall.

24 Email Etiquette

Email is an important tool where information can be communicated, hopefully efficiently and succinctly. Here are some suggestions to ensure your email communication is professional, courteous, and efficient.

SUBJECT LINE

- In the subject line, include the topic of the main message. If an event date and time is in the message, include those in the subject line.
- Make it clear whether the message requires response or is for information purpose.
- Don’t leave the subject line blank.
- Provide a brief 5-10 word subject description in the subject line, where possible.
- Do not forward a previously sent e-mail and subject line to ask a new question completely unrelated to the previous e-mail content. Start a new e-mail instead.

MESSAGE BODY

- In the salutation, show your courtesy.
  - Address someone by name – either “Dear Mr. Smith” or “Good Morning, Prof. Jones” to those in authority or considered higher rank. A salutation like, “Hi Mary,” is acceptable if the recipient is a peer, if the person is okay with being addressed by first name, or is a familiar person with whom a working relationship is established.
  - *Never ever* address someone by their full name: “Dear Mike Bernard” – that’s “nails on a chalkboard” to many.
- In the first sentence or two, provide the most important and relevant parts of the entire message. Most people skim quickly through their messages. You want the most important part to be the first thing they read.
- Keep your emails as short as possible. If the e-mail is of medium length, create headers for each main paragraph. If the e-mail is long, provide a bullet-point summary at the beginning of the message and invite readers to read the details that follow.
- If you seek a response, try to make the reader’s job as easy as possible by
asking specific questions that can be answered by short messages, even “yes” and “no,” where possible.

- You can include an e-mail “trail” for information/documentation purposes but don’t expect the reader to read through every attached message. A summary of the e-mail trail on the top of your message is best.

### 25 Notice of Non-Discriminatory Policy

The Johns Hopkins University admits students of any race, color, sex, religion, national or ethnic origin, handicap or veteran status to all of the rights, privileges, programs, benefits, and activities generally accorded or made available to students at the University. It does not discriminate on the basis of race, color, sex, religion, sexual orientation, national or ethnic origin, handicap or veteran status in any program or activity, including the administration of its educational policies, admission policies, scholarship and loan programs, and athletic and other University-administered programs. Accordingly, the University does not take into consideration personal factors that are irrelevant to the program involved.

Questions regarding access to programs following Title VI, Title IX, and Section 504 should be referred to the Affirmative Action Officer, 205 Garland Hall, 410-516-8075.

### 26 For More Information...

Visit the [Mechanical Engineering](#) page or any of these pages:

- [The people of Mechanical Engineering](#)
- Academic Advising
- [Top 12 – Undergraduate](#) – for most information that undergrad students seek.
